DSV2-100-4CO Four-Way, Two-Position,

Spool-Type Solenoid Valve

SERIES 10

DESCRIPTION

A cartridge valve designed as a four-way, spool-type, directional control valve with all ports normally-open. This valve is commonly used in a circuit to allow flow to and from a double-acting cylinder or motor.

OPERATION

When de-energized, the DSV2-100-4CO allows flow from 3 to 2 and from 4 to 1.

When energized, the cartridge's spool shifts and allows flow from 3 to 4 and from 2 to 1.

Operation of Manual Override Option: To override, push button in, twist counterclockwise and release. In this position, valve will remain detented in the shifted condition.

To return to normal operation, push button in, twist clockwise and release. Override will be detented in this position.

FEATURES and BENEFITS

- · Continuous-duty solenoid.
- · Hardened precision spool and sleeve for long life.
- Efficient wet-armature construction.
- Cartridges are voltage interchangeable.
- · Optional coil voltages and terminations.
- Manual override option.
- Industry common cavity.
